

MS 2001: Exercises

October 12, 2010

1 Inequalities

1. Sketch a rough graph of:

- $(x - 2)^2$
- $x^3 - 2x - 3$
- $-2x^2 + x - 5$

2. Find the solution set of the inequality

$$\frac{x}{x+2} \leq \frac{3}{x-2}$$

3. Find the solution set of the inequality

$$|x+4| > |3x-8|$$

and mark this set on a diagram.

4. Find a positive number $N > 0$ such that

$$\left| x^3 - 3x \cos x + \frac{4}{x} \right| \leq N$$

for all $1 \leq x \leq 3$.

2 Limits & Continuity

Investigate the limit as $x \rightarrow \infty$ of the following functions:

$$g(x) = \frac{x^5 - 4x^2 + 2}{5 + 2x^4 - 7x^5}$$

$$h(x) = \frac{x^2 - x + 1}{x - 2}$$

Investigate the limits

$$\lim_{x \rightarrow 1} g(x)$$

$$\lim_{x \rightarrow 2} h(x)$$

3 Differentiation

Define a function G by

$$G(x) = \frac{1}{(4x^3 + 7x^2)^{10}} \quad (1)$$

Deduce that G is differentiable whenever $x \neq 0, -7/4$ and find $G'(x)$.

4 Curve Sketching and MinMax Problems

1. Examine the critical points of the function $f : [-3, 3] \rightarrow \mathbb{R}$ defined by $f(x) = x^3 - 3x$, and sketch its graph.
2. A woman arrives at a point A on the shore of a circular lake with radius 2 km wants to arrive at the point C diametrically opposite A on the other side of the lake in the shortest possible time. She can walk at a rate of 4 km/hr, and row a boat at 2 km/hr. How should she proceed?
3. Find the area of the largest rectangle that can be inscribed in a semicircle of radius r , with one side of the rectangle on the straight side of the semicircle.
